

Wardley Mapping

Please define and reflect upon the following terms as mentioned in the lecture and problem-solving sections. Each term should be afforded one paragraph (5 paragraphs total):

1. Components, Dependencies, Anchor, Evolution, and Pipeline

Ans: When I started building my Wardley Map for making a YouTube video, the first thing I did was break down all the components. These are basically all the individual pieces needed to make the whole thing happen, from the big visible stuff to the things working in the background. In the map, this includes the "Creator's Idea," the "Camera," "Editing Software," and even the "YouTube Platform" itself. Thinking about all these separate parts helped me realize that creating a video isn't just one single task. It's actually a complex system of creative thoughts, physical tools, software, and services that all have to come together.

Next figuring out the dependencies, it describe how components rely on one another to function successfully. For example, the "Editing" component depends on "Raw Footage," "Audio Track," "Editing Software," and "Computer," showing that without those, editing cannot take place. Similarly, the "YouTube Platform" depends on a stable "Internet Connection," which in turn requires "Power." Drawing these connections made it obvious how a problem in one area can stop the entire project. If your computer is slow, editing becomes a nightmare, and if the power goes out, well, you can't do anything at all.

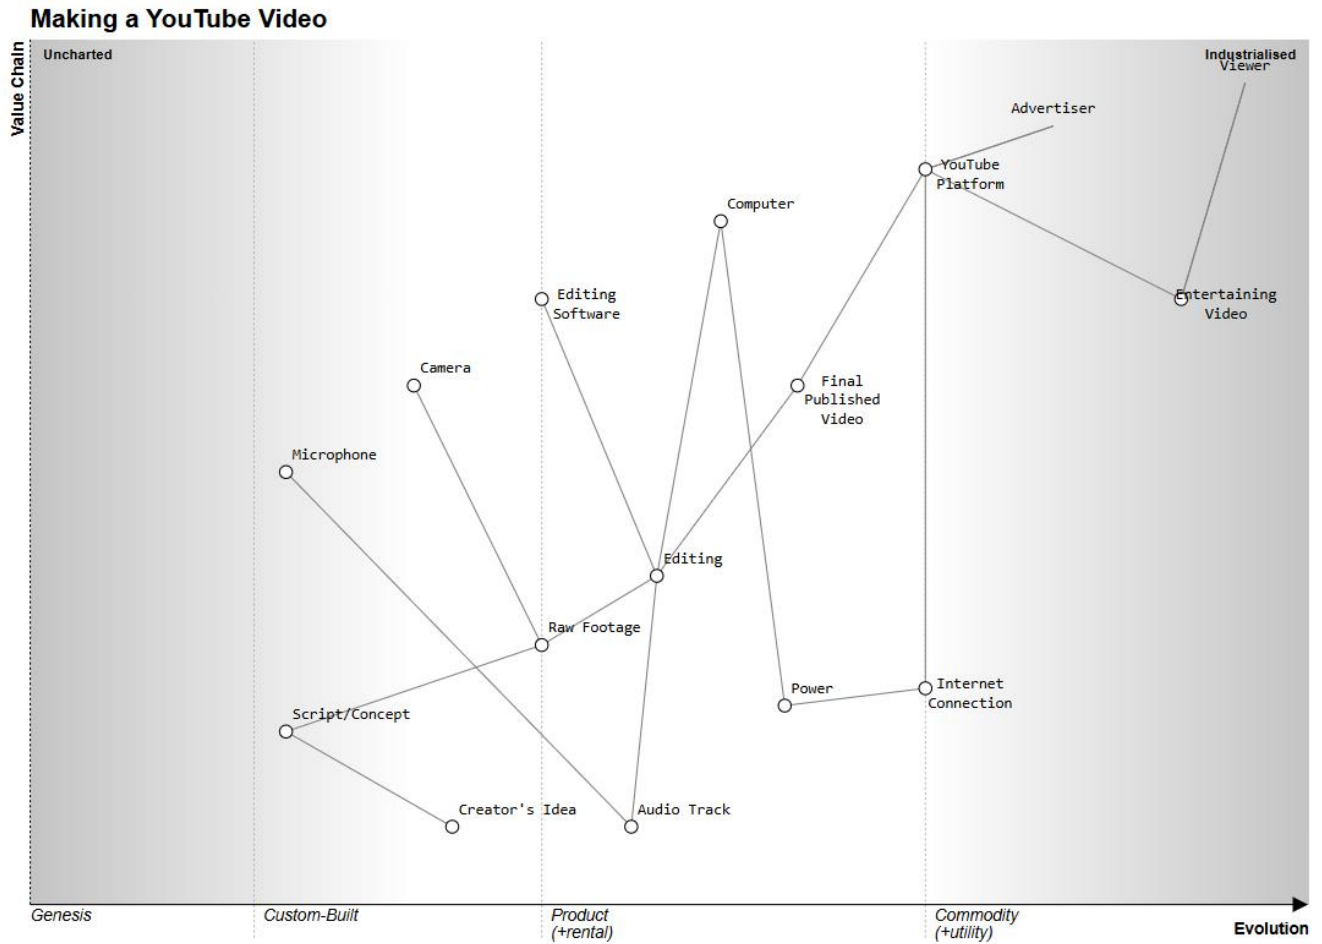

The anchor is a vital reference point in the Map, representing the ultimate user or stakeholder need that the entire system supports. For making a YouTube video, the main anchor is the "Viewer," whose need is to watch an "Entertaining Video." There's another anchor, the "Advertiser," who wants to reach that viewer. Keeping the viewer at the very top is super important because it provides focus. All the cool camera gear, editing tricks, and software don't really matter on their own. They only have value if they help create something the viewer actually wants to watch.

Evolution charts how components change over time along a progression from "Genesis," where things are new and uncertain, towards "Commodity," where they are standardized and widely available. In the map, early creative elements like "Creator's Idea" and "Script/Concept" sit on the left, representing novel, custom work. Components like the "Editing Software" and "YouTube Platform" are further right, reflecting their maturity and wider availability. Understanding evolution helps identify where innovation is needed and where reliable, standardized capabilities can be leveraged, guiding investment and operational focus.

Finally, the pipeline is the overall flow that shows how all these pieces connect to deliver the final product. In this case, it starts with the "Creator's Idea" and moves through the "Script," "Raw Footage," and "Editing" stages until it becomes a "Final Published Video" that gets uploaded to the "YouTube Platform" for the viewer. This illustrates how raw creative inputs are transformed through various stages until they become consumer-ready content. Recognizing pipelines helps

manage workflows efficiently, spot bottlenecks, and optimize the journey from concept to delivery.

2. Draw the map using Power Point or use the Interactive Wardley Map shown in class. Take a screenshot/save diagram in .png/.gif/.jpg format and upload to Canvas.

title Making a YouTube Video

anchor Viewer [0.95, 0.95]

anchor Advertiser [0.9, 0.8]

component Entertaining Video [0.7, 0.9]

component YouTube Platform [0.85, 0.7]

component Final Published Video [0.6, 0.6]

component Editing [0.38, 0.49]

component Editing Software [0.7, 0.4]

component Raw Footage [0.3, 0.4]

component Audio Track [0.09, 0.47]

component Computer [0.79, 0.54]

component Camera [0.6, 0.3]

component Microphone [0.5, 0.2]

component Script/Concept [0.2, 0.2]

component Creator's Idea [0.09, 0.33]

component Internet Connection [0.25, 0.7]

component Power [0.23, 0.59]

Viewer->Entertaining Video

Advertiser->YouTube Platform

Entertaining Video->YouTube Platform

YouTube Platform->Final Published Video

YouTube Platform->Internet Connection

Final Published Video->Editing

Editing->Raw Footage

Editing->Audio Track

Editing->Editing Software

Editing->Computer

Raw Footage->Camera

Raw Footage->Script/Concept

Script/Concept->Creator's Idea

Audio Track->Microphone

Computer->Power

Internet Connection->Power
